Less sunlight / Back-to-school blues / Work demands: Any One Equals Fatigue

New Clinical Research Confirms Supplement's Fatigue-fighting Capacity

Morristown, NJ (Sept. 14, 2006)— The fall season signals the onset of low-energy days for many Americans, whether that fatigue is related to an increased work or academic load; fewer daylight hours; illness; or a combination of factors.

New research unveiled at the recent 2006 International AIDS Conference shows that an all-natural oral supplement can help alleviate stress factors by helping the body help itself.

"This research confirms that GliSODin[®] can trigger the human body to produce the most powerful antioxidants—the ones inside you— which may help to combat and recover from fatigue caused by stress," said Carl Germano, RD, CNS, CDN, a researcher associated with a new study conducted with West African AIDS patients. "If immunocompromised individuals can benefit from GliSODin[®]'s unique ability to catalyze these internal antioxidants, it isn't hard to imagine what it can do for any individual suffering from stress-related fatigue."

Oxidative stress is a factor associated with many health challenges, especially AIDS in which the effect is heightened by potent anti-retroviral therapies. By promoting the body's own antioxidant capacity, patients would be prepared for both better compliance and response to the anti-retroviral therapy. In the Ivory Coast study, low antioxidant levels—including the "powerhouse" antioxidant superoxide dismutase (SOD)—of 35 AIDS patients were measured. The 35 were then divided blindly into three groups. For 21 days, one group took GliSODin[®], one took untreated SOD, and the last group was given a placebo.

At the end of the study, a statistically significant restoration of circulating antioxidant capacities was observed in the group taking GliSODin[®]. There were no significant effects observed within the other two groups.

For a copy of the study, or information on GliSODin[®]'s other multiple benefits to immune system, skin and muscle health, contact Scott Rosenbush (973-984-0900, scott@plthomas.com).

About GliSODin®

GliSODin® is the only clinically-proven supplement that can fight oxidative stress by stimulating the body's own built-in defense system. In addition to helping the body fight fatigue, in-vivo and clinical trials in six countries across three continents reveal that GliSODin® can support skin health against photo-oxidative stress caused by UV radiation and reduce lactic acid buildup in humans under physical stress (e.g., athletes, etc.) It's available in North America as a nutritional raw material exclusively from PL Thomas & Co., Morristown, NJ. For more, visit www.glisodininfo.com.

About PL Thomas & Isocell

GliSODin® is patented and trademarked by Isocell Nutra, Paris, France. PL Thomas & Co., a New Jersey-based ingredient supplier, is the North American agent for GliSODin®. PL Thomas offers 50 years of innovation in securing reliable, high-quality raw materials for the food/functional food and nutrition industries.
